

LAMP FILAMENTS

Collect both the entire lamp and all bulbs if possible.

Push bulb through a hole cut into the bottom of a cup. Cut the bottom out of a second cup. Leave the third cup as is.

Place the open ended cup over the cup containing the bulb.

Place the last cup on top. Seal box with evidence tape and affix tag.

Helpful Tips

- When collecting the entire lamp make sure to protect the filament inside.
- Collect all bulbs from any vehicle head, tail, brake lamps, and turn signals in question.
- The lamp filament is critical to analyzing on/off characteristics and must be protected.
- Bulbs packaged in Styrofoam cups may be placed in a box for further protection.
- Collect entire lamp and housing unit and place entire lamp in a box. Seal with evidence tape.
